FOR IMMEDIATE RELEASE

## **KAIROS AUTONOMI INTRODUCES ITS HIGH PERFORMANCE AETHERIC RADIO**

### **Proven Multi-Application Ground Robotics Radio Offers Maximum Connectivity**

Salt Lake City Utah, August 21, 2012 – [Kairos Autonomi®](http://www.kairosautonomi.com), a worldwide supplier of unmanned Robotic Appliqué Kits, has introduced its own high performance, cost-effective Aetheric radio for use with the [Pronto4 Robotic Appliqué Kit](#).

Available with a variety of radio frequencies to maximize connectivity in a point-to-point, bridging or fused network configuration, the Aetheric radio offers reliability at a competitive price. The radio is sheltered in a waterproof, dustproof, NEMA-67 rated outdoor enclosure that includes 1, 2, or 4 N-type antenna options, a quick disconnect RJ-45 connector and silicone-rubber gasket.

The radio weighs 3 pounds (1.36kg) and is capable of temperatures of -45C to +90C. The radios power supply comes from 9-28 VDC over Ethernet and is RoHS compliant.

“Our Aetheric radio has proven its capability and flexibility with great results for our end users in a range of applications,” said Troy Takach, President and CEO of Kairos Autonomi. “We are providing a ground radio solution that offers connectivity, frequency and diagnostic flexibility at a practical price.”

Benefits of the Aetheric radios are as follows:

- Rugged enclosure allows for use in extreme environments
- High bandwidth capability enables a variety of applications (data, voice, video)
- Flexible mounting brackets allow for operation in any situation
- Configurable for point-to-point, fused or multi-path communications
- J/F 12 authorization for Moving Land Targets (10144)
- Proven operations with ground robotics

- Other bands available, including Military, Civilian, NATO and Federal

### **About Kairos Autonomi**

Web: [www.kairosautonomi.com](http://www.kairosautonomi.com)

Kairos Autonomi, Inc. is the pioneer in Robotic Appliqué Kits, add-on vehicle autonomy systems that provide unmanned capabilities to current manned vehicles, rendering them optionally unmanned. With its emphasis on simplicity, cost-effectiveness, ubiquity and interoperability, Kairos has proven since 2006 that one-third unmanned by 2015 is achievable only with robotic appliqué kits.
